

Welcome to my UI design of Time Trade, an imaginary mobile app that allows you to trade time with others to give and receive help with tasks.

The first time you go through, I suggest you follow along as instructed. This will help you understand the specific flow I designed. Afterwards, feel free to explore as you please.

In functional form, this app would allow for many more possibilities - changing your tasks, finding someone you can help, etc.. For the purposes of this project, I designed the flow of steps required to accomplish a single goal: finding someone to help you with a task.

Thanks for checking it out!

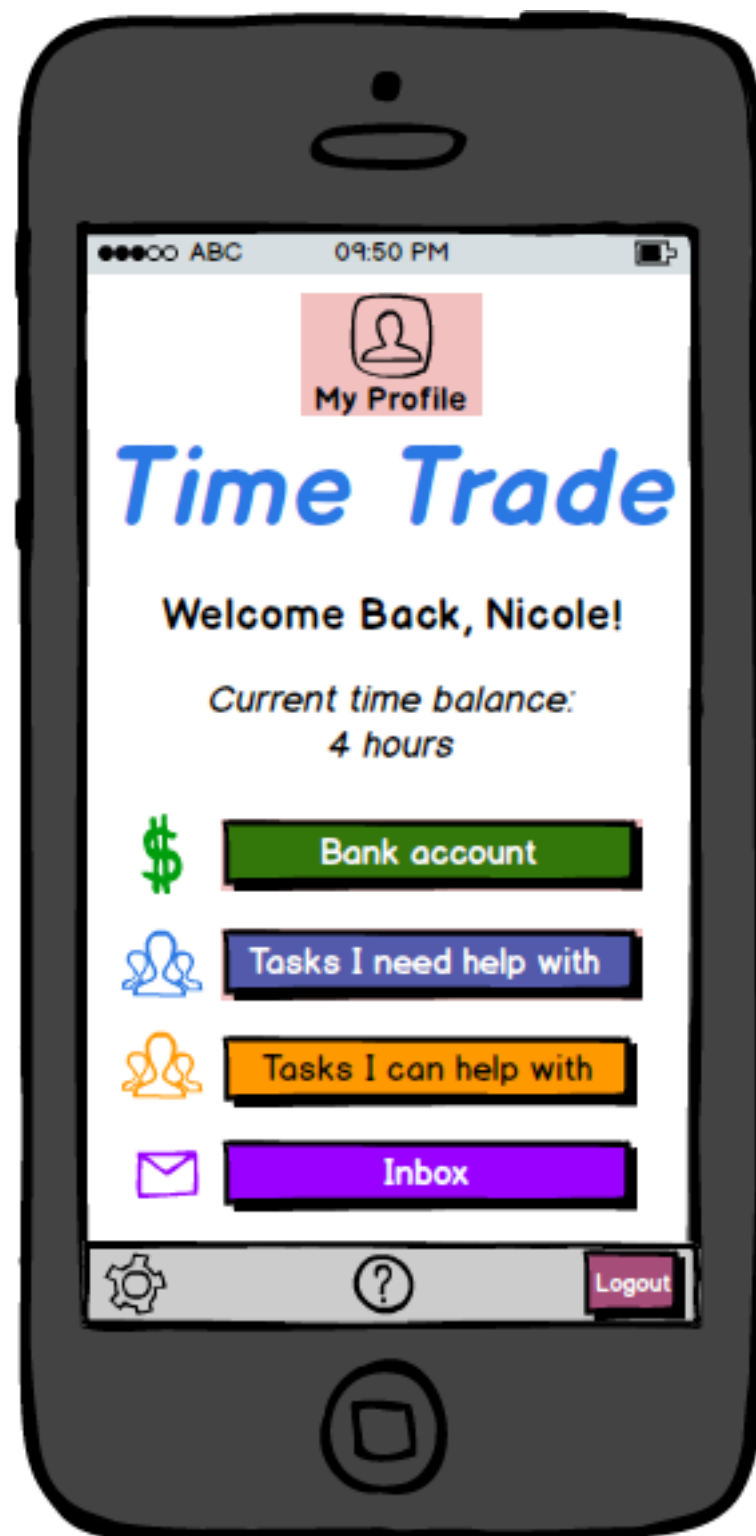

You, Nicole, log into your Time Trade
account

(click "Log in")

You see your Home Page and decide
to check your profile settings

(click "My Profile")

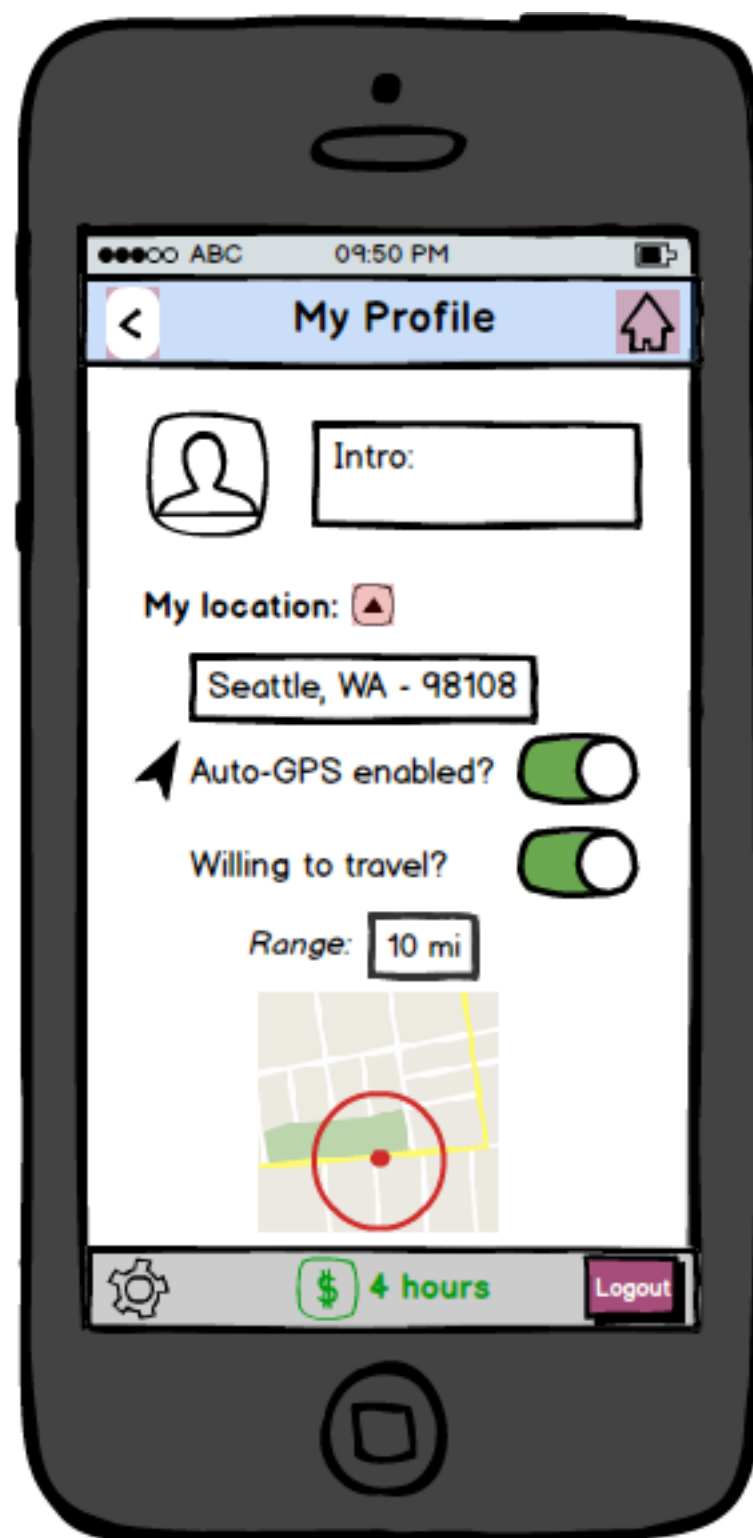

First, you check your location, since
you moved recently and want to make
sure you updated it

(click "v" to the right of My location)

Yes, that's correct! You minimize this section so you can check your schedule availability

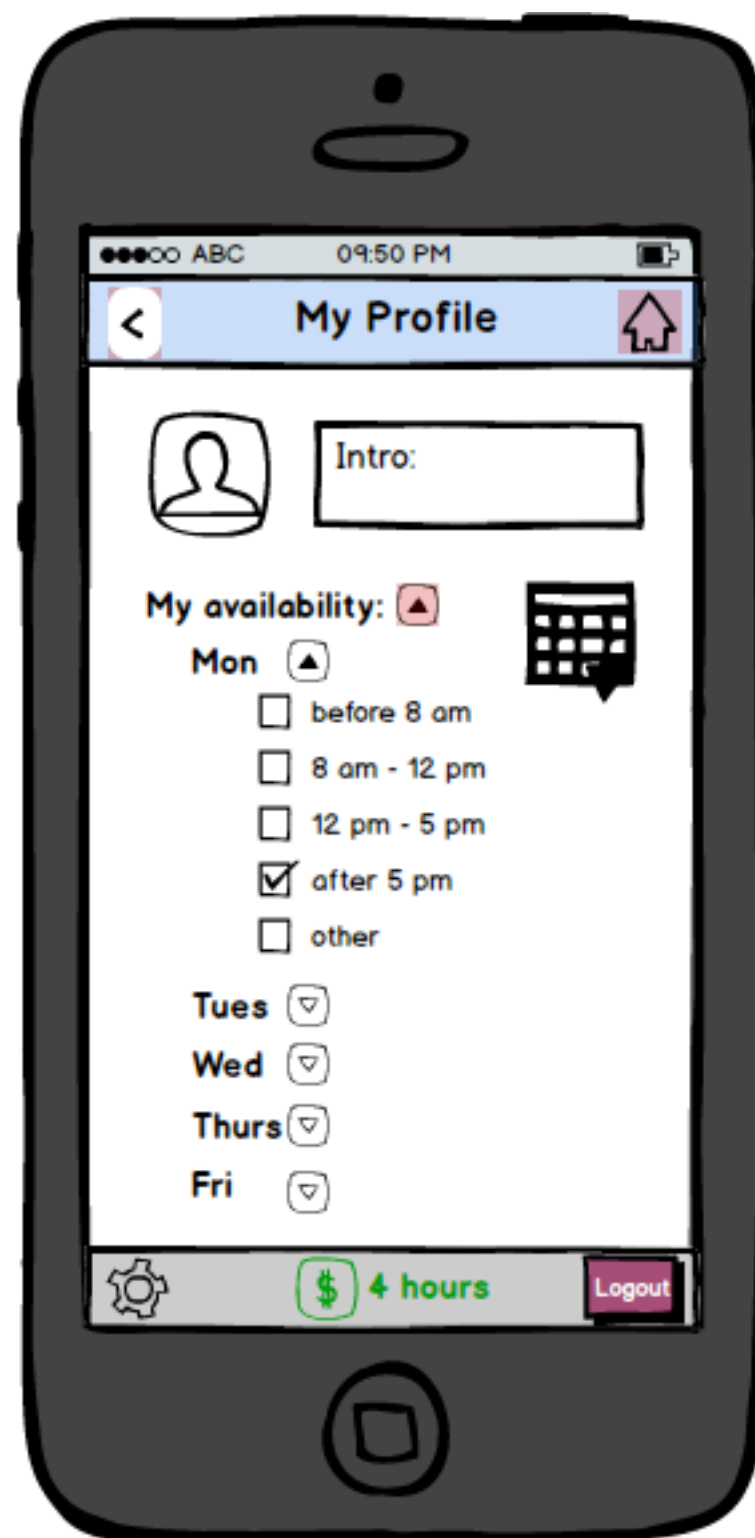

(click "^" to the right of My location)

You expand the availaibility section
(click "v" to the right of My availability)

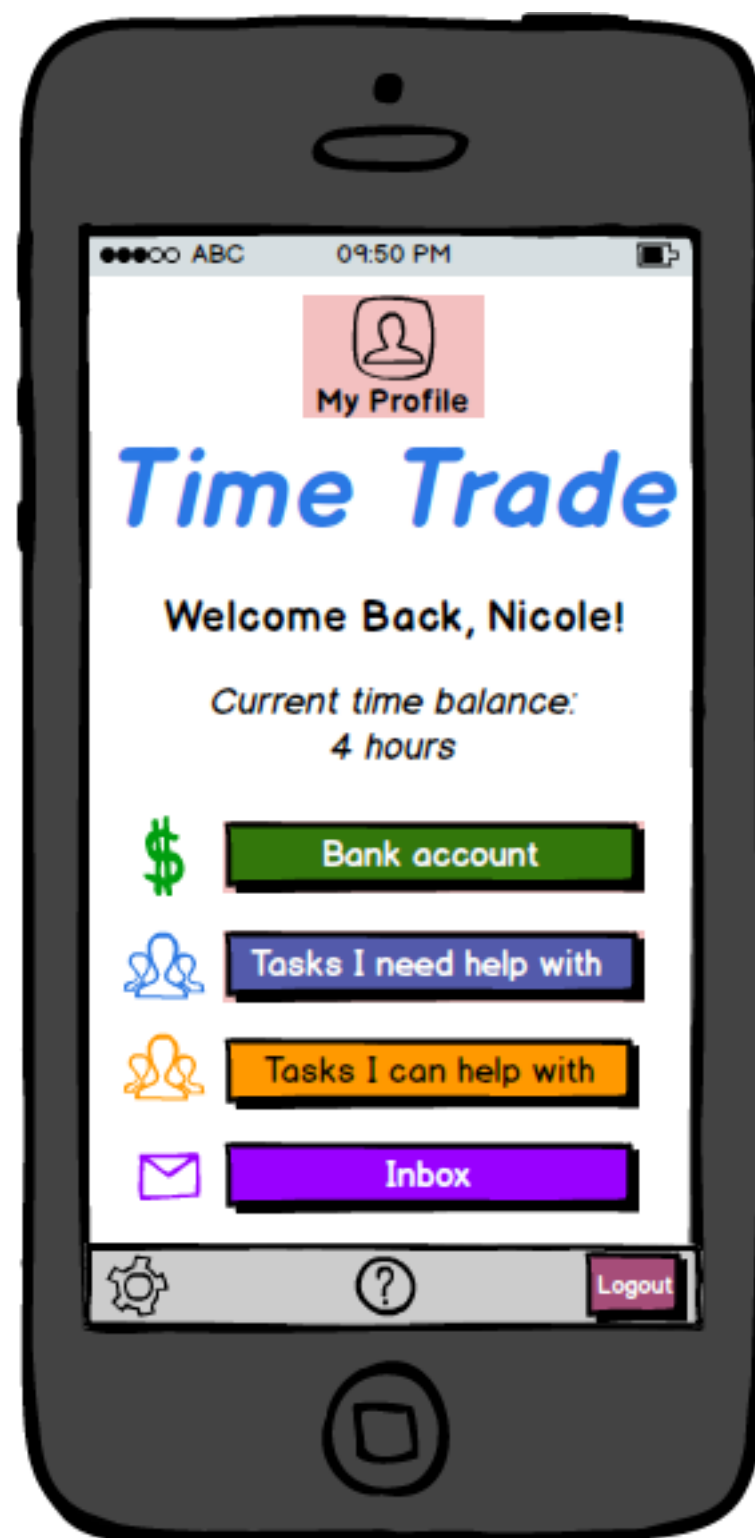

You verify that your availability is up-to-date and return to your Home Page
(click Home icon on top right corner)

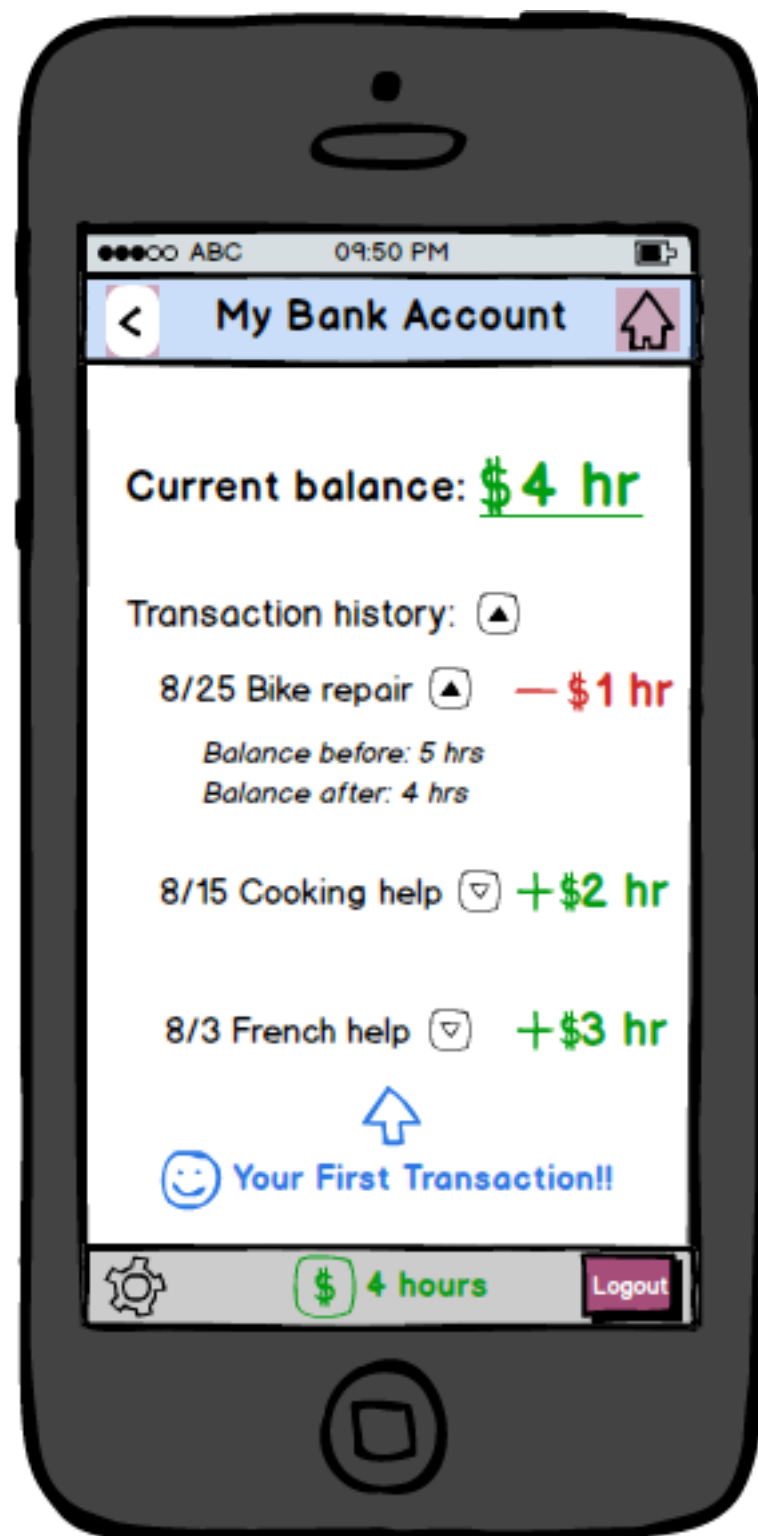

Next, you decide to check your Bank Account to see your past transactions

(click "Bank account")

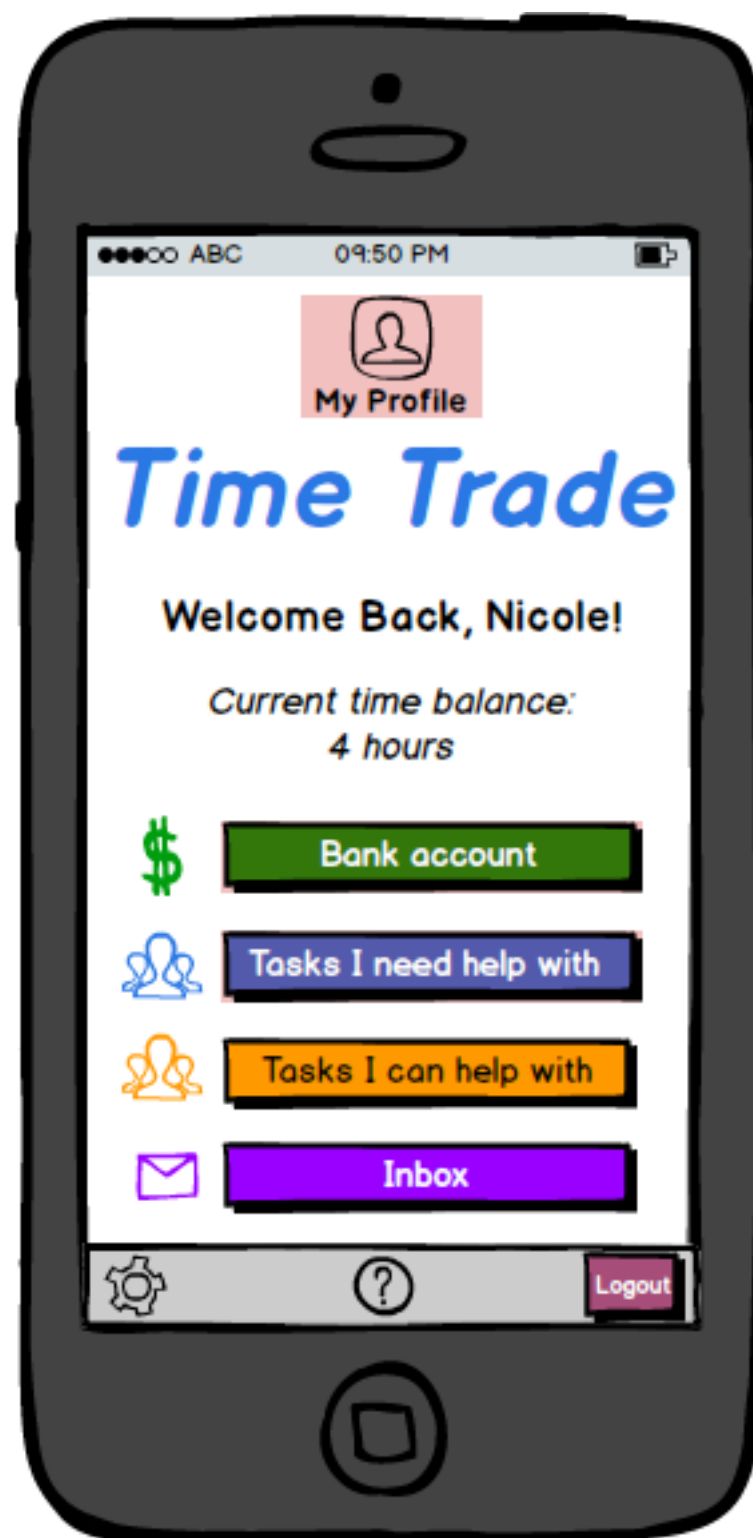

Your transactions look good! Since you've built up some hours, you decide it's time to get some help on your tasks. You return to your Home Page (click Home icon on top right corner)

To start looking for someone to help you, you check out the tasks you want help with

(click "Tasks I need help with")

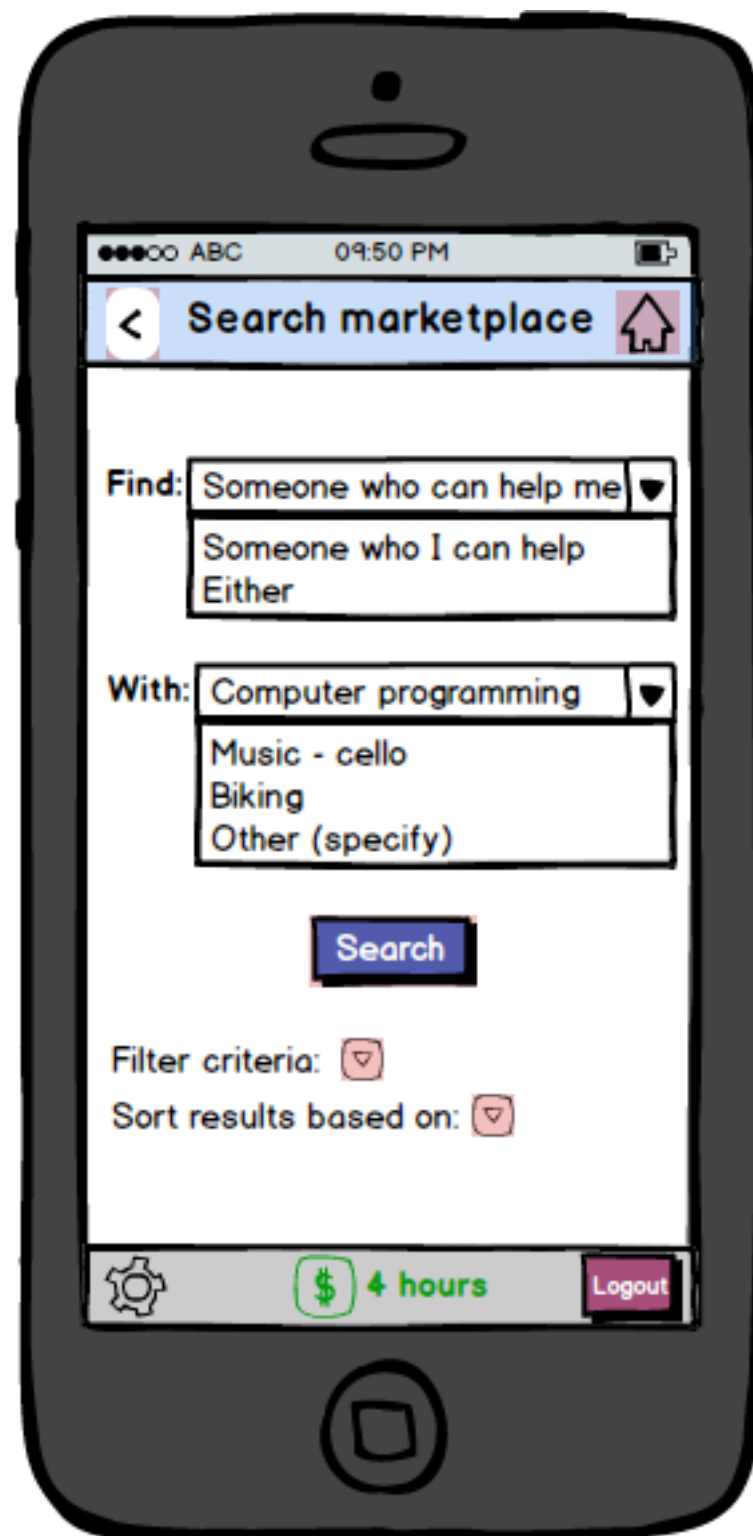

You want help on a couple different tasks, but learning computer programming is at the top of your list. You decide to look for someone to help you with that

(click "Find someone to help me!")

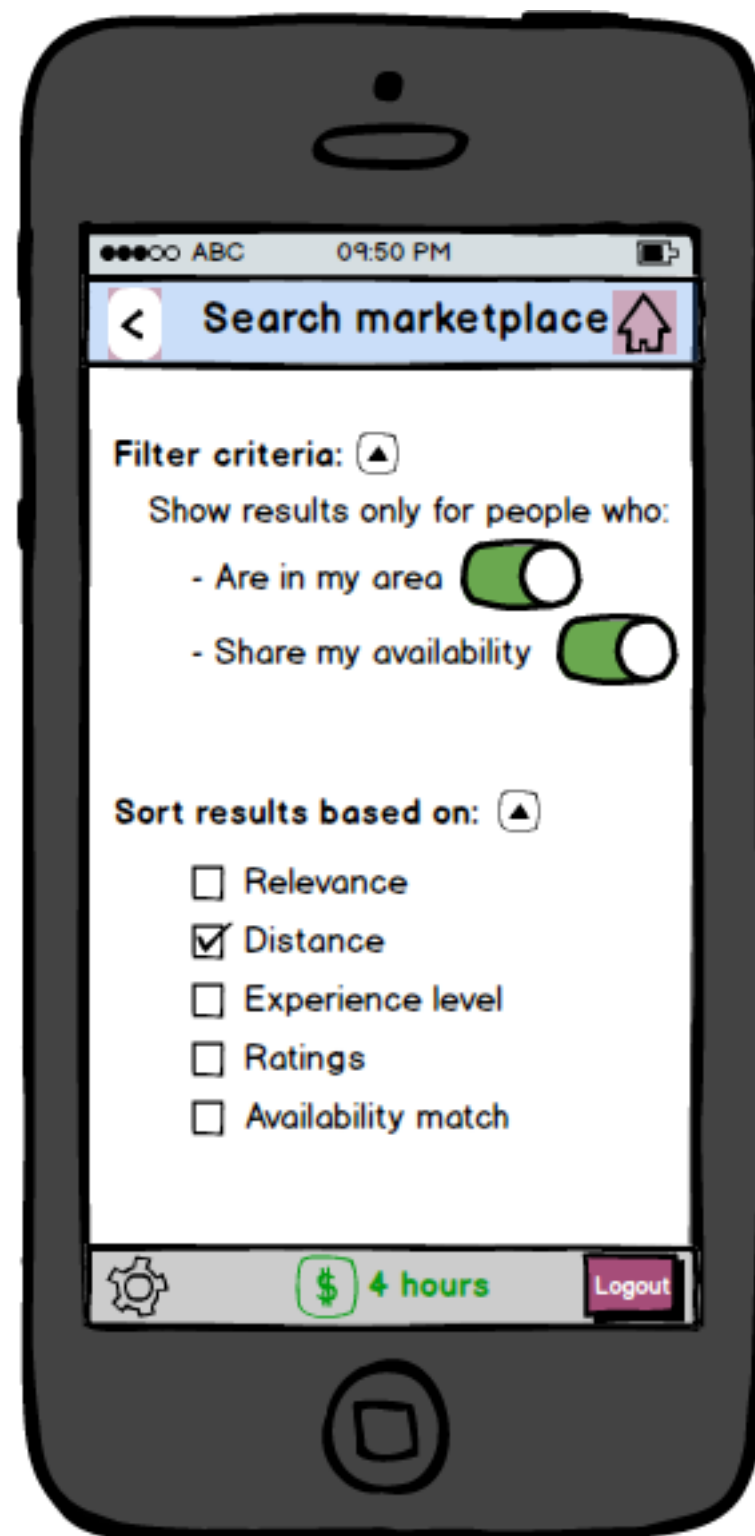

You specify your search criteria and
double check how you're filtering your
results

(click "v" to the right of Filter criteria)

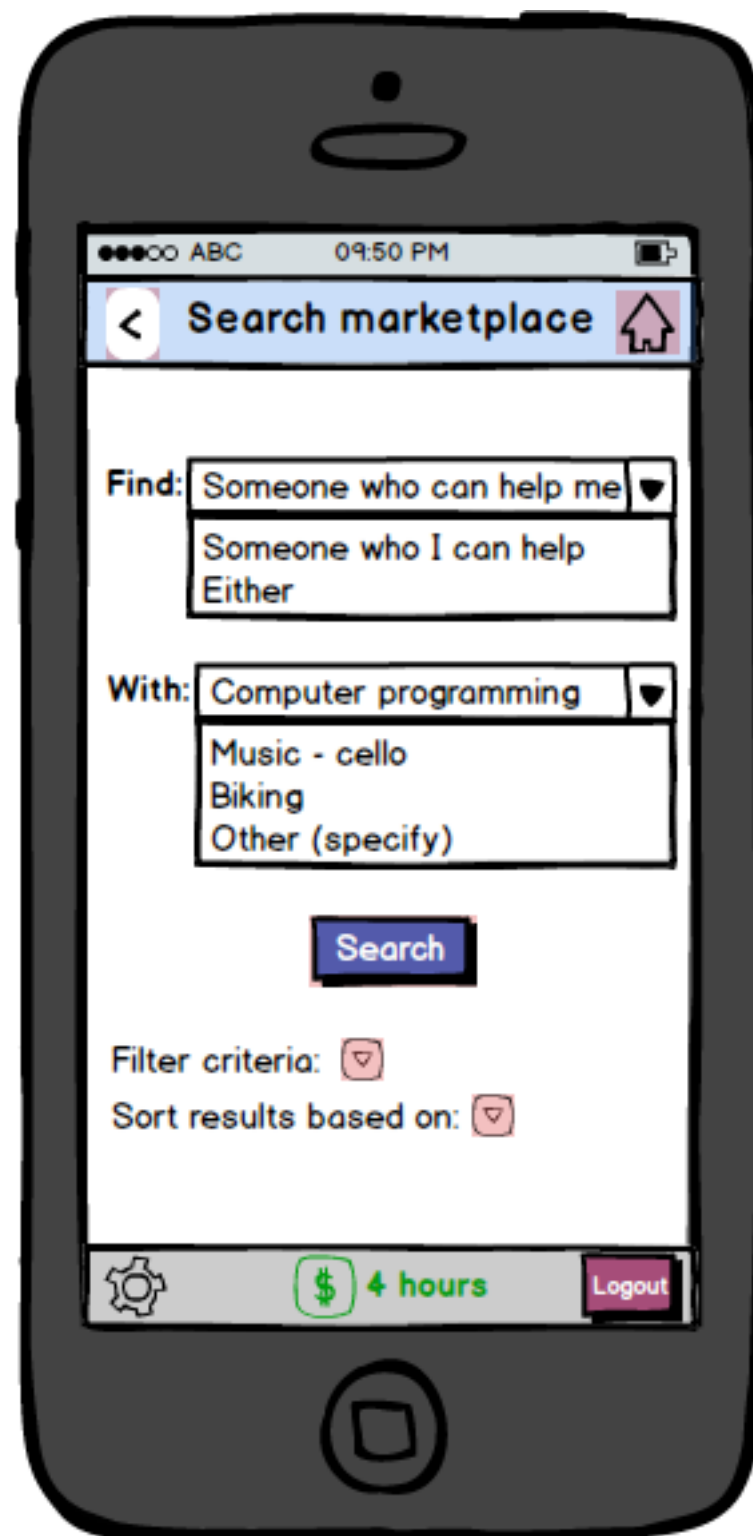

You confirm your filter and sorting criteria, and return to the search criteria page

(click "<" on top left corner)

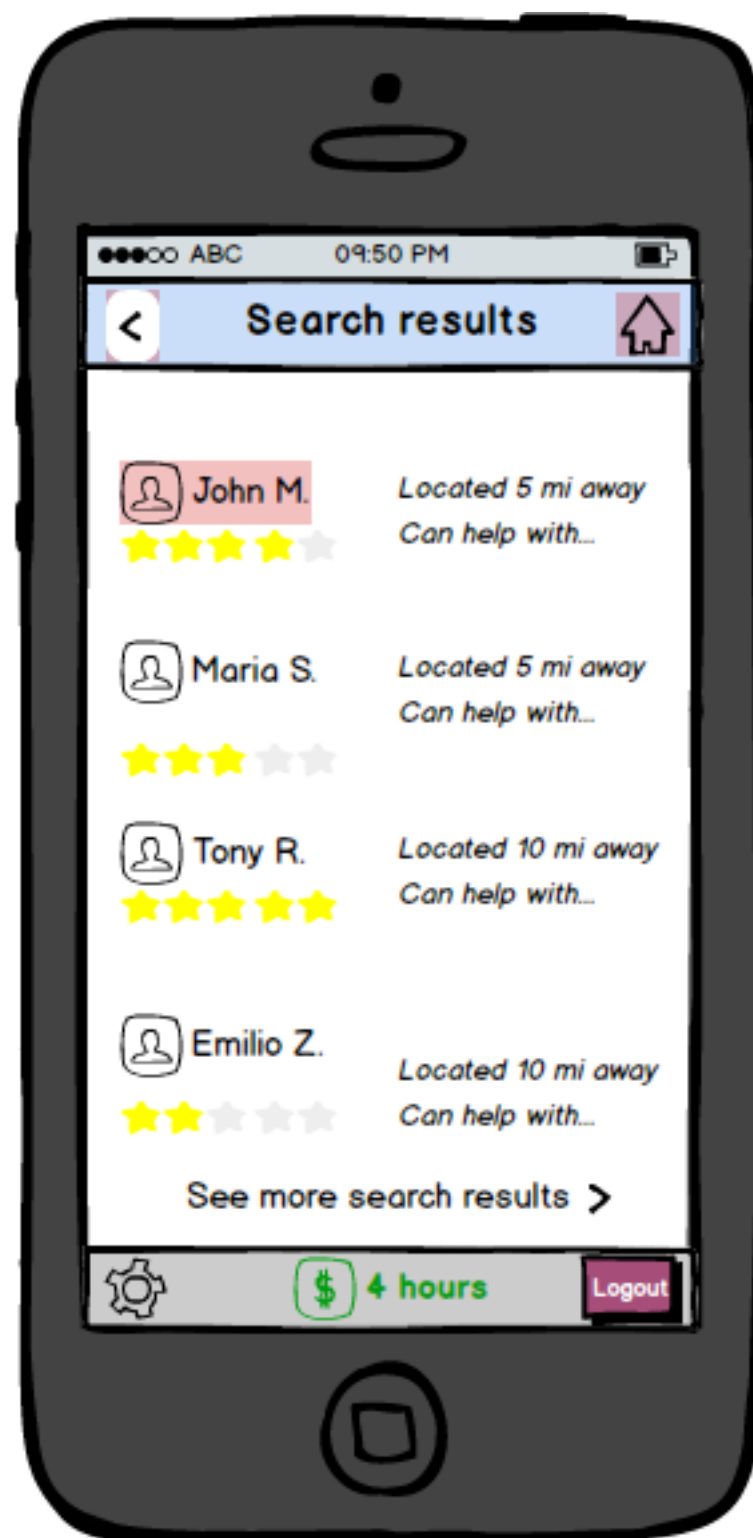

Ok, you're ready to search!
(click "Search")

You've gotten several results, so you decide to start with the person closest to you, John M.

(click "John M.")

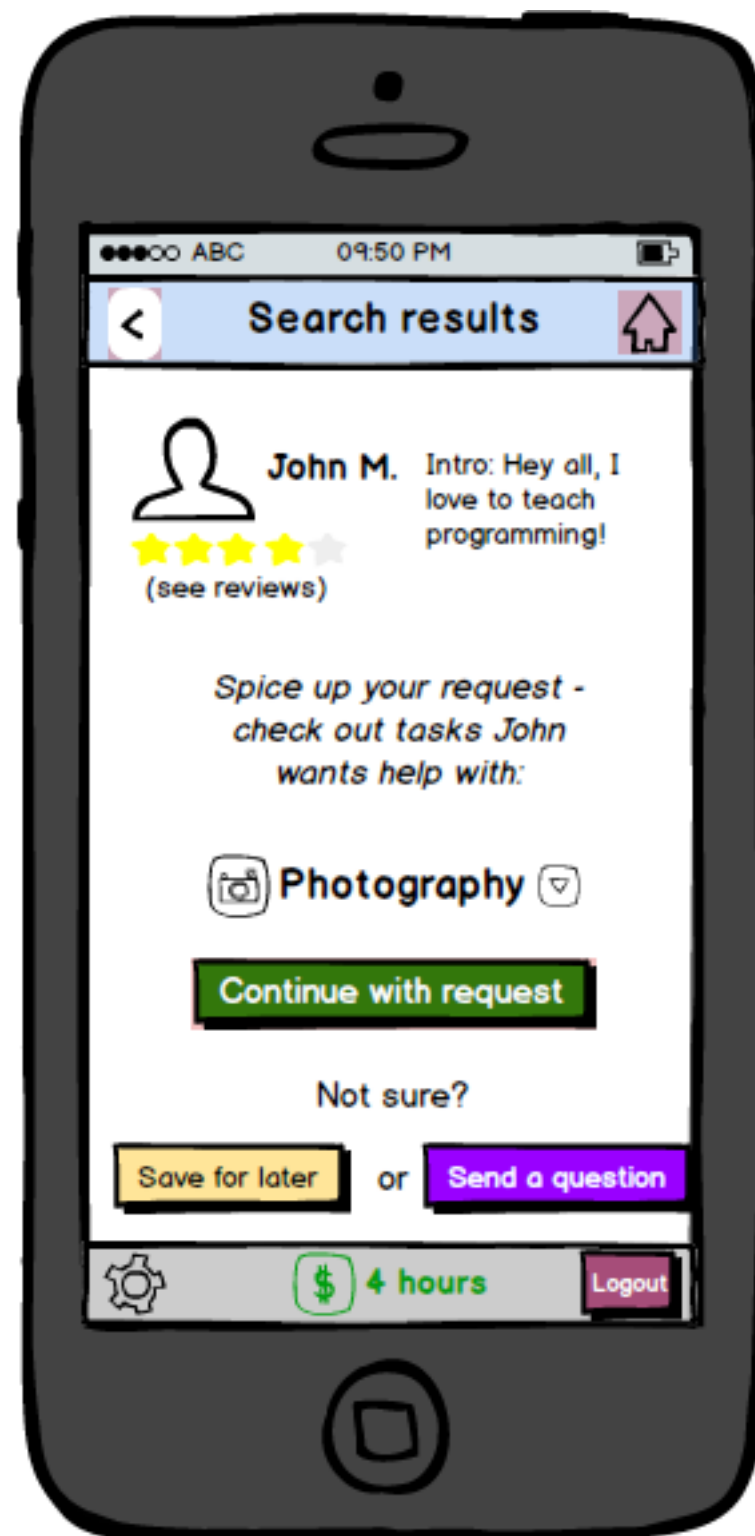

Looks like John has everything you're looking for and great ratings, so you decide to send him a request

(click "Good match? Send request!")

You could decide to try to make your offer more attractive by offering to help him with one of his desired tasks - but you decide to skip this step and go ahead with the request

(click "Continue with request")

You specify how many hours of help you want, the specific task and your comments, which are used to automatically build the message. To be on the safe side, you preview the request first

(click "Preview request")

Request John's help

Request hours

Of help

- Music - cello
- Biking
- Other (specify)

Suggest date:

Additional comments:

Send request

Cancel request **Save for later**

⚙️ \$ 4 hours Logout

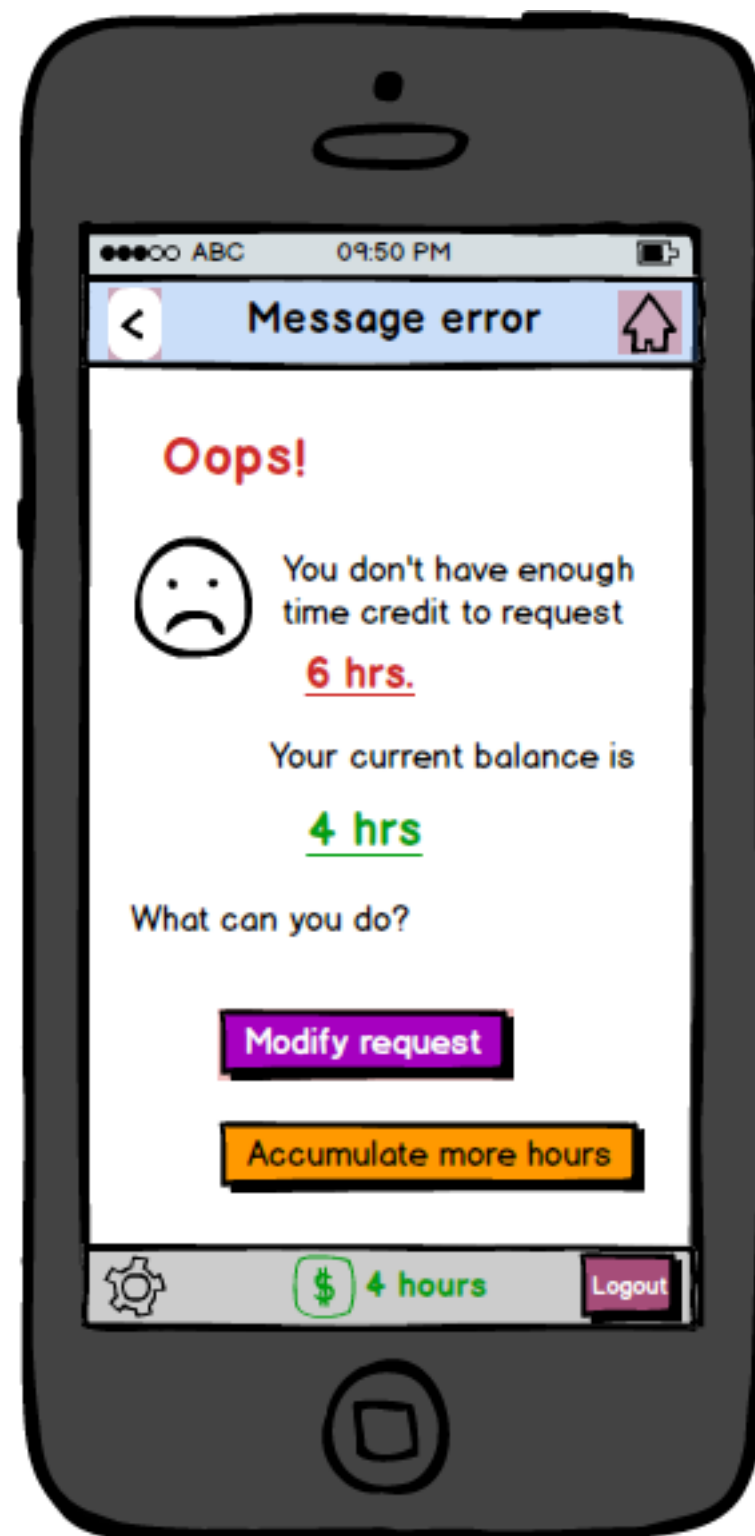

Looks great! You're ready to send it.

(click "Send request")

Uh oh! You realize you requested more hours of help than you have in your account. You decide to change your request

(click "Modify request")

You reduce the number of hours of help you're requesting from John, so that you're within your budget. You preview the revised request

(click "Preview request")

Request John's help

Request hours

Of help

Settings \$ 4 hours Logout

This looks good. You're ready to send it
(click "Send request")

Your request was sent! You feel a sense of accomplishment and anticipation as you wait for John's response, and you log out

(click "Log out")

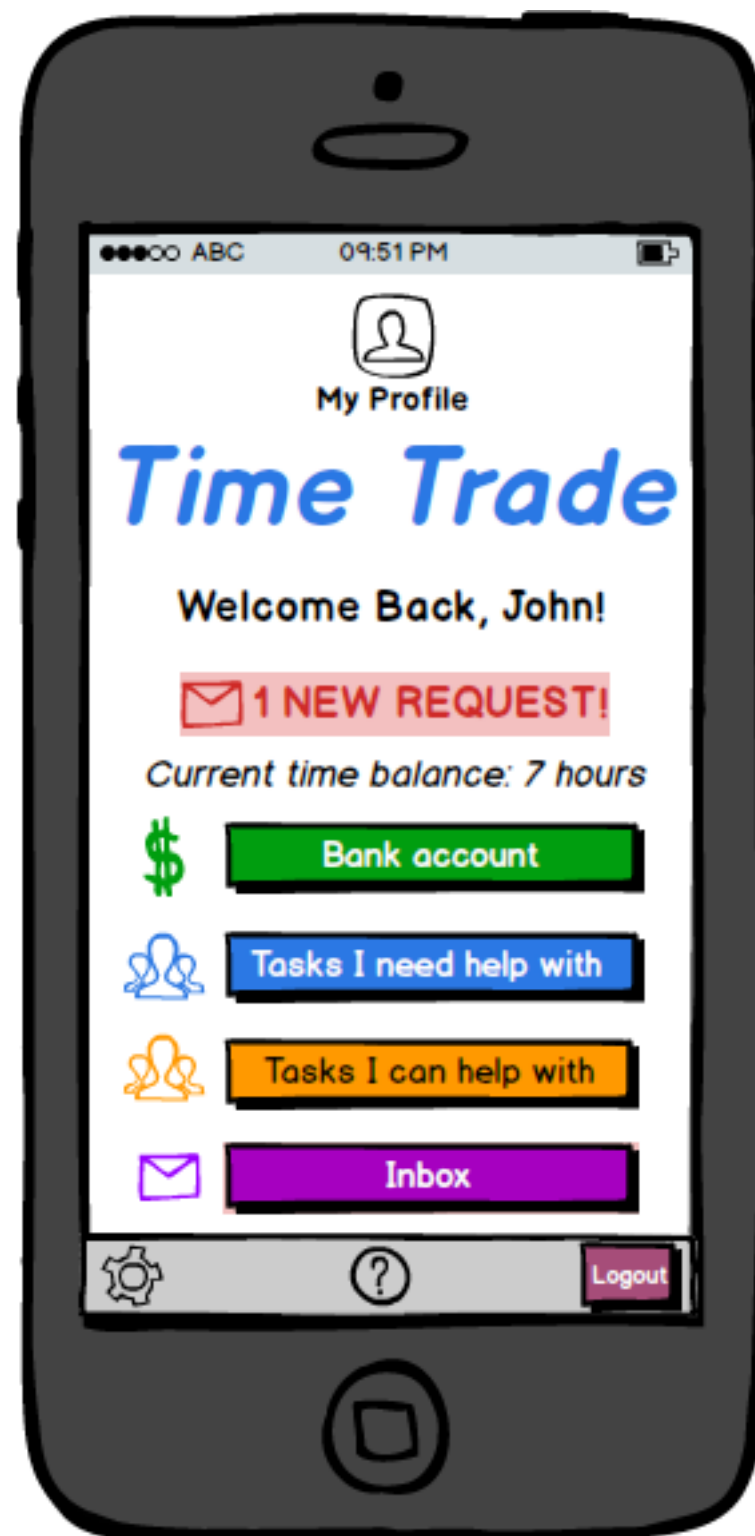

Character switch - now you're John. You
log into your account

(click "Log in")

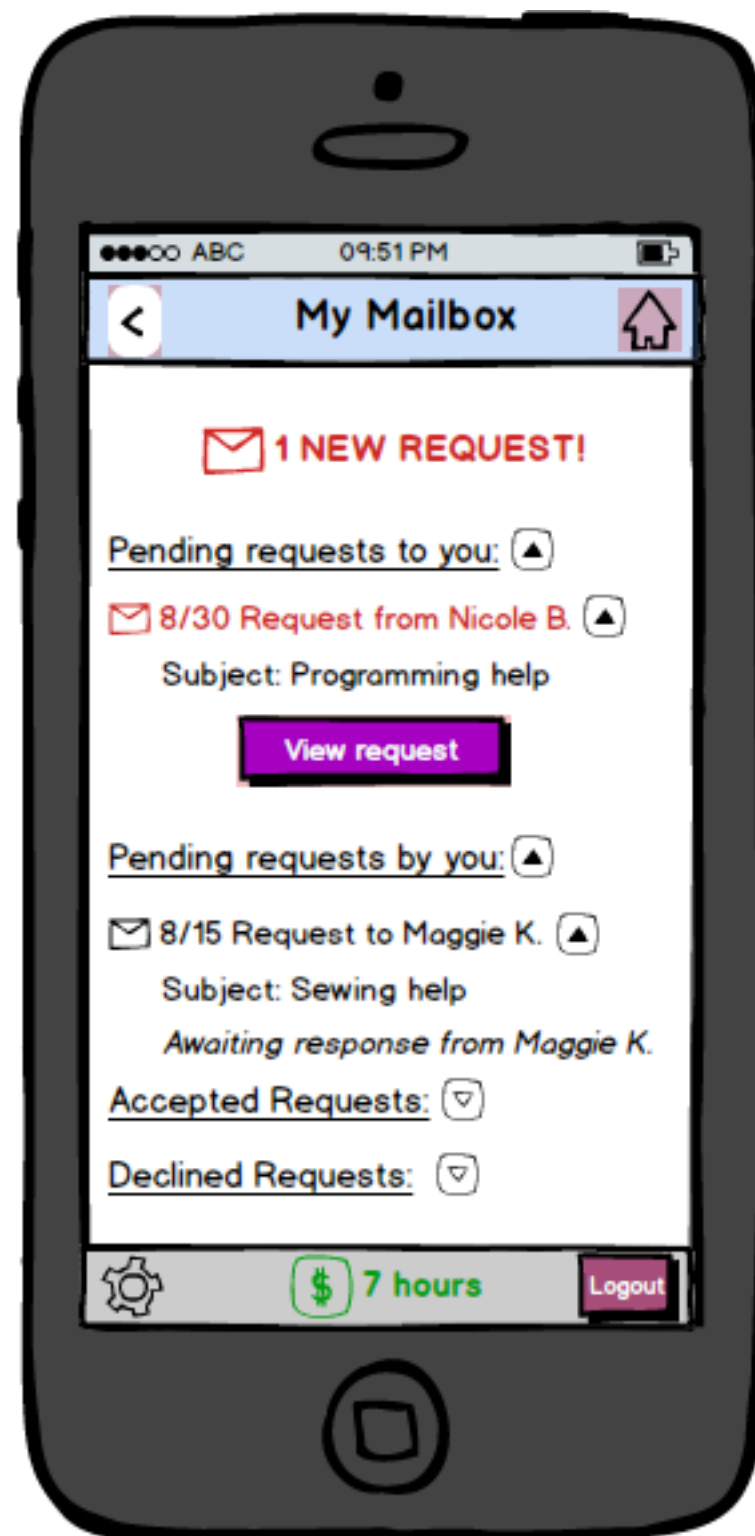

On your Home page, you see that you have a new request. You open it up

(click "1 New Request!")

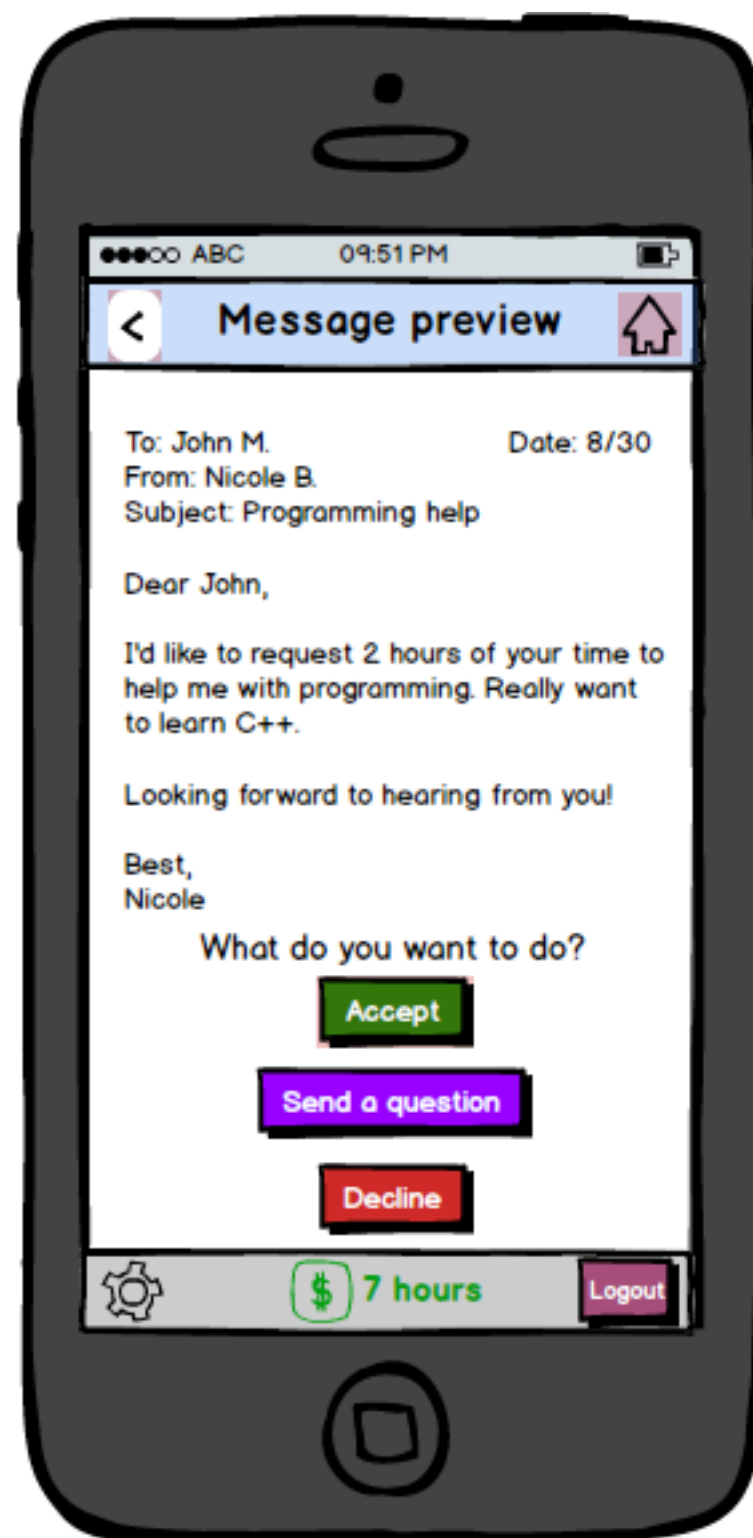

It looks like Nicole B. has requested your programming help. You're interested to learn more so you open up her request

(click "View request")

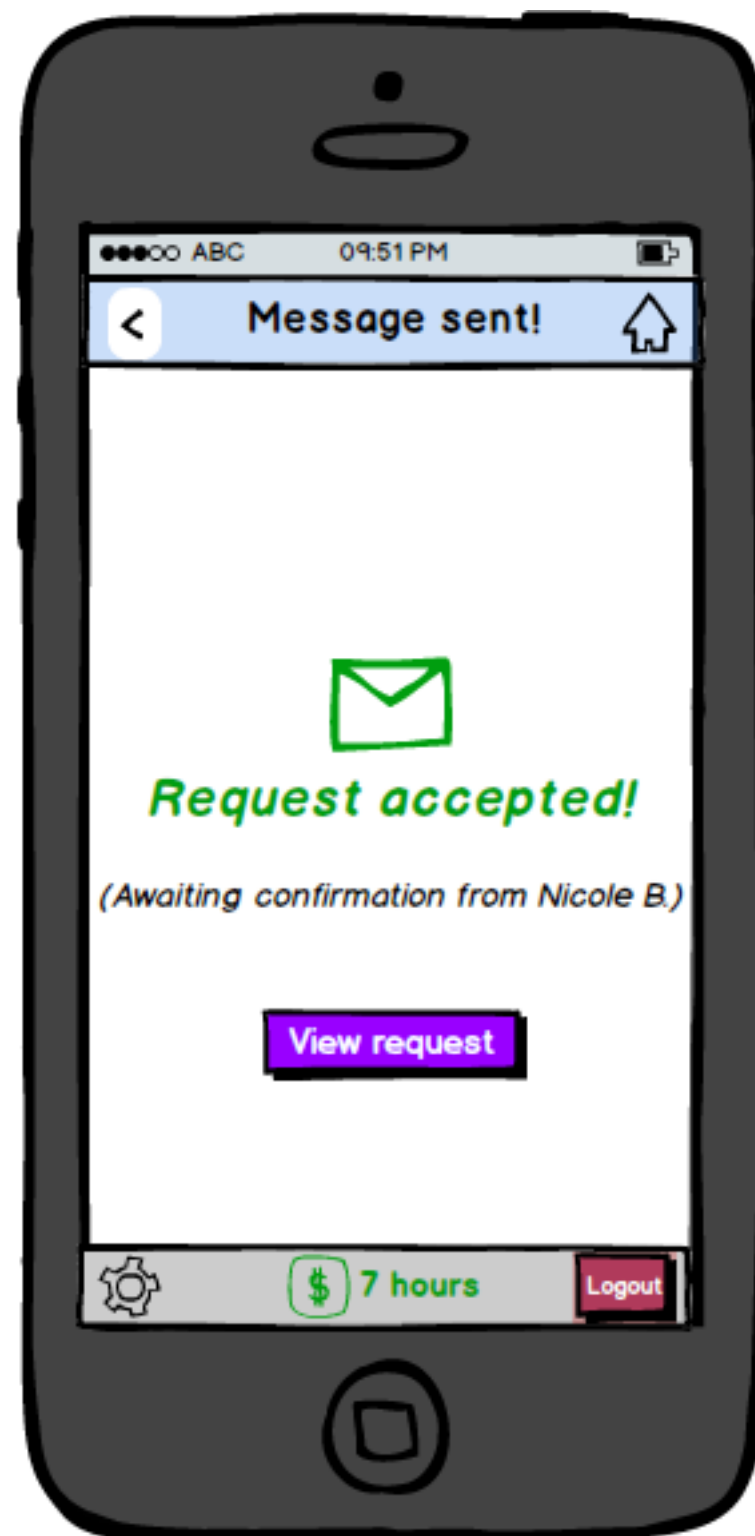

This sounds like a good way to build up
some more hours while having fun
teaching programming to someone
else. You decide to accept the request

(click "Accept")

Awesome! Now you just have to wait for
Nicole to confirm the transaction. You
log out

(click "Log out")

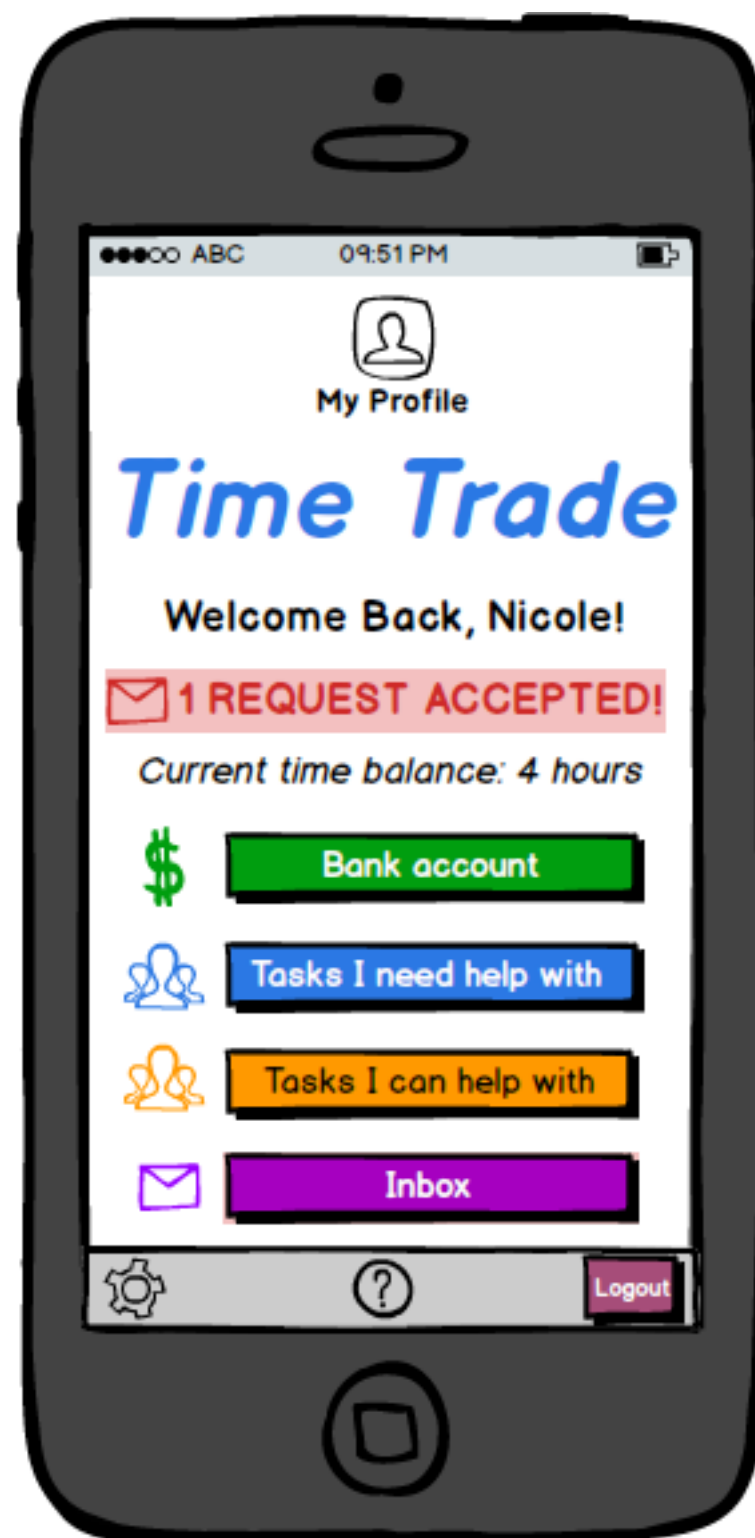

As Nicole once more, you log in
(click "Log in")

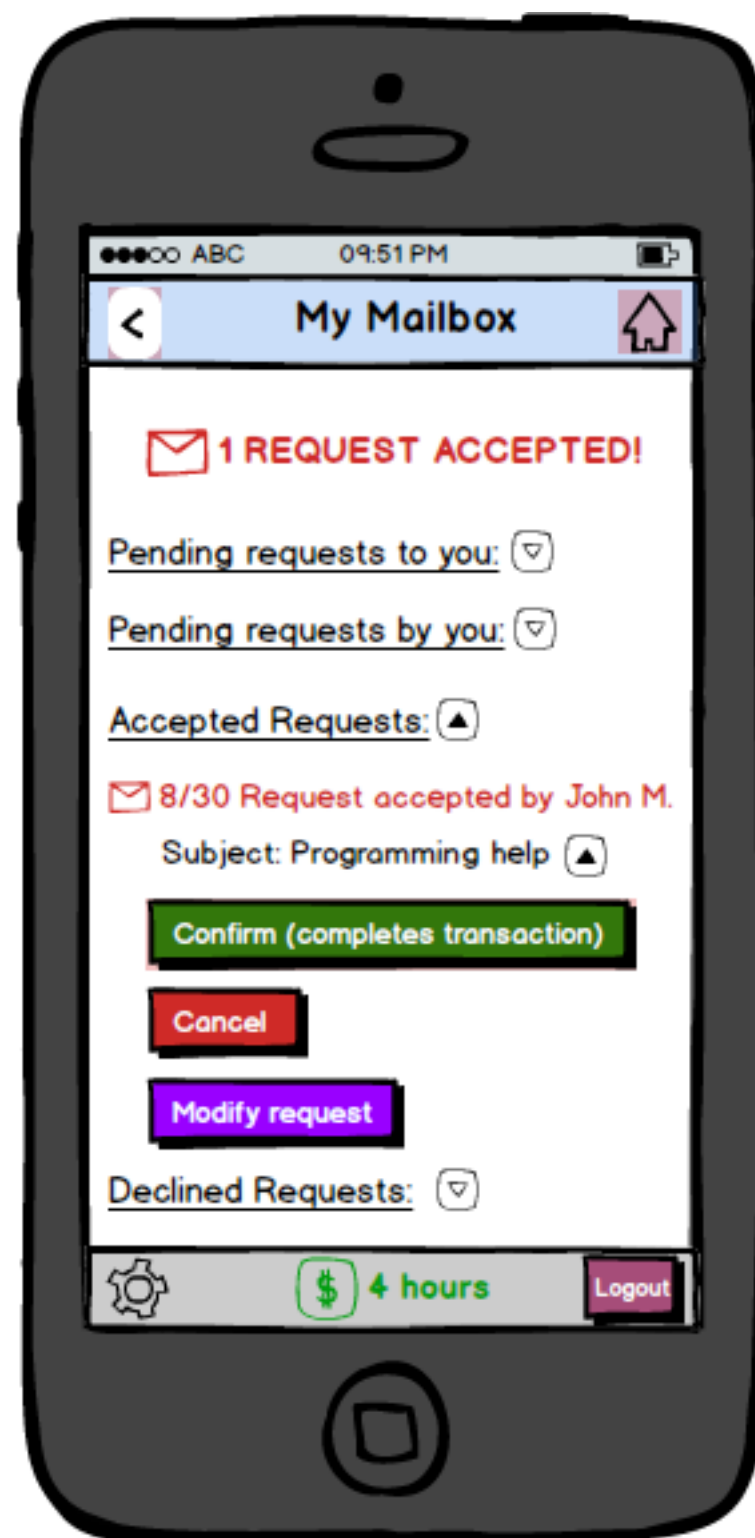

You see that someone has accepted
your request! You open your Inbox to
learn more

(click "Inbox")

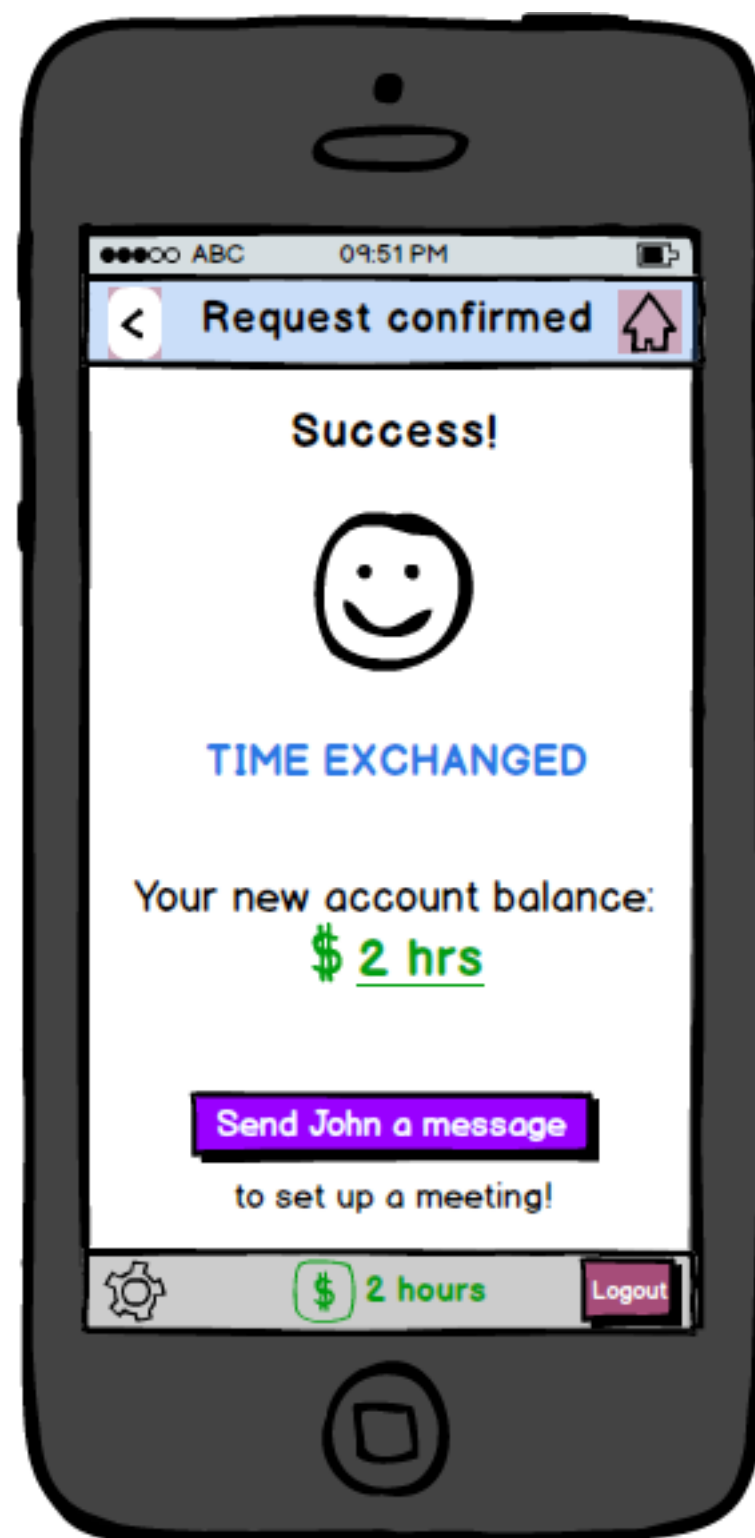

Great news - John has agreed to help
you learn programming! You confirm the
transaction as the last step

(click "Confirm")

Excellent! You've now traded two hours of your time for John's programming help. You can't wait to learn C++.

The End!

You've accomplished your goal of
finding some to help you with a task
you're interested in.
